MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp.
ADDRESS: 800 Clement Ave. Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST IDENT. | ACTUAL CONCENTRATION | MEETS ANSI STANDARD (<) 1.4 mg | DOES NOT MEET ANSI STANDARD (>) 1.4 mg |
|--------------------------------|----------------------|--------------------------------|--|
| MARRAGE Bureau 1914-15, 16, 17 | .11 | ✓ | |
| | | | |
| | | | |
| | | | |
| | | | |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 19.1-45: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.

MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp
ADDRESS: 800 Claremont Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST IDENT. | ACTUAL CONCENTRATION | HERTS ANSI STANDARD (<) 1.4 mg | DOES NOT MEET ANSI STANDARD (>) 1.4 mg |
|------------------------------------|----------------------|--------------------------------|--|
| Micor Type Bureaux 1914-15, 16, 17 | .11 | ✓ | |
| | | | |
| | | | |
| | | | |
| | | | |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 175.1-46: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.
